About Enzen (www.enzen.com)

Enzen Global is an innovative & knowledge-based Consulting, Engineering and Operations organization exclusively working on Energy and Utility (Gas, Power, and Water) sectors. We provide outcome-based turnkey solutions, blending industry best practices and leading-edge ideas with a continuous focus on meeting our customers' expectations.

We work with clients across the value chain to deliver sustainable and lasting improvements to their efficiency and performance. As part of our solution suite, we provide strategy, consulting, digital, technology, management, and operations services. In addition, we develop the commercially successful use of renewable resources to deliver a transformative advantage for our customers.

Enzen focuses on delivering outcomes and has a wide range of advisory and engineering services for the power, water, gas and renewable energy sectors, supported by our specialised Business Units and unique Centres of Excellence. These cover Business Operations, Business Transformation, Enterprise Solutions and Energy & Water Network Operations, and help deliver high-quality, effective, need-specific solutions. Our project work includes but is not limited to smart utility networks, technology optimisation, capital efficiency, asset management and mergers & acquisitions.

Founded in 2006, the business has grown and developed across the globe, with a presence in the UK, India, USA, Spain, Australia, Turkey and Kazakhstan.

Job Description:

- Provisioning and managing Windows servers: This includes creating and configuring new EC2 instances, attaching EBS volumes, and installing and configuring the Windows Server operating system.
- Windows server hardening: This involves configuring Windows servers in a secure manner to mitigate security risks. This includes applying security patches, configuring firewalls and other security settings, and implementing best practices for user account management and authentication.
- Windows server performance monitoring and optimization: This involves monitoring the performance of Windows servers and making necessary optimizations to improve performance and reliability. This may include tasks such as adjusting memory and processor settings, tuning SQL Server databases, and optimizing network performance.
- Windows server troubleshooting and disaster recovery: This involves troubleshooting problems with Windows servers and recovering from disasters such as data loss or hardware failure.
- Develop and implement Windows server policies and procedures.

- Work with other IT team members to integrate Windows servers with other systems and applications.
- Stay up-to-date on the latest Windows server technologies and best practices.
- Provide technical support to users and other IT staff.
- AWS Certified Solutions Architect - Associate or Professional.
- Experience with Windows Server virtualization technologies, such as Hyper-V.
- Experience with Windows server security technologies, such as System Center Configuration Manager and System Center Endpoint Protection.
- Experience with scripting languages, such as PowerShell.
- Strong understanding of Windows server technologies, including Active Directory, Group Policy, and Windows Server roles and features.
- Experience with AWS services, including EC2, EBS, S3, and RDS.
- Excellent problem-solving and troubleshooting skills.
- Ability to work independently and as part of a team.
- Strong communication and interpersonal skills.

Qualification and Experience:

- Bachelor's degree in Computer Science, or a related field (or equivalent experience).
- 2+ years of experience in administering Windows servers.
